PULSATION DAMPENER DRAWING 146i-2000p twin

Review competition - LINK to: [BLACOH PULSATION DAMPENER DRAWINGS](#)

Compare these 1965 original gas in the bag "Bladder" type one piece molded, no bonds or glue, top end reservicable pulsation dampeners, from the originators of the design.

Review the principle of operation [SEE THE ANIMATION RUN](#)  
 A tapered cylinder, with pressure internally will expand progressively from the large diameter and elongate as the wall is prevented from expanding further. Simply because hoop stress is twice longitudinal stress.

These pulsation dampeners from the **PIPEGUARD "SLIMLINE" range** - proved since 1965, have our "Flo-Thru" feature tested by University of Einhoven 1967.
